YOUR LIFE. BETTER CONNECTED.

EXCEPTIONAL

You want your home electronics to do more. You want to enjoy more music in more places. You want movies and TV to be more involving. You want access to all of the great content that's available online, and you want all of your devices to be connected. You want to control everything from anywhere. Making all this happen is what we do – exceptionally well.

EXPERIENCE

We come from MyerEmco, a company that served the Washington DC area for more than 55 years. Our system designers, project managers and technicians have decades of experience creating and installing extraordinary electronic systems in the region's finest homes.

ENGINEERING

Modern home electronics are increasingly connected to the Internet, and to each other. Few components are truly plug-and-play. Our systems aren't just assembled - they're engineered - to work simply, seamlessly and efficiently together.

EQUIPMENT

Our systems are simply superior. We recommend and sell the finest brands in the industry. Premium products from premier manufacturers, integrated into carefully-crafted systems that are more than the sum of their parts.

EXECUTION

You trust us to come into your home - to work neatly and efficiently, and to provide a craftsman's fit and finish to our work. Invariably we do, and when we're finished, we make sure you know how to use everything we've installed. We've completed thousands of projects for clients who come back to us time and again to keep them current and continually enhance the technology in their homes.

PROCESS

It all begins with an in-home consultation.

We meet with you in your own home, where we can best assess your needs and wishes and see first-hand what needs to happen to make our products a part of your life.

Our approach is unique to you.

Your project is one of a kind. No two projects we have ever done have been exactly the same. Our proposal reflects a careful evaluation of your specific requirements and the particular design, layout and construction of your home.

Everyone is on the same team.

We don't use subcontractors. Everyone we send to your home works for us. All phases of your job are continually supervised by our extensively-experienced in-field project management team.

We are with you every step of the way.

We are not satisfied until you are. Once your equipment is installed and operational, we make sure you know how it works and how to work it. We're always happy to answer questions and our trucks are regularly in the field providing service and support after the sale.

WE COME TO YOU

In-home consultation at your convenience.

WE LOOK, WE LISTEN

Tell us your wishes as well as your requirements.

DESIGN & ENGINEERING

Based on decades of experience.

COLLABORATION

We work with your architect, interior designer, cabinet maker or general contractor.

OUR PROPOSAL

Competitive, comprehensive, clear.

PROJECT MANAGEMENT

In-field supervisors oversee your project.

INSTALLATION

WALK-THROUGH

Designer, project manager, lead installer visually inspect the site.

PREWIRE

We build the backbone while the walls are open.

TRIMOUT

The equipment goes in. We program your controls.

IT'S YOURS

We demonstrate the system and train you in its use.

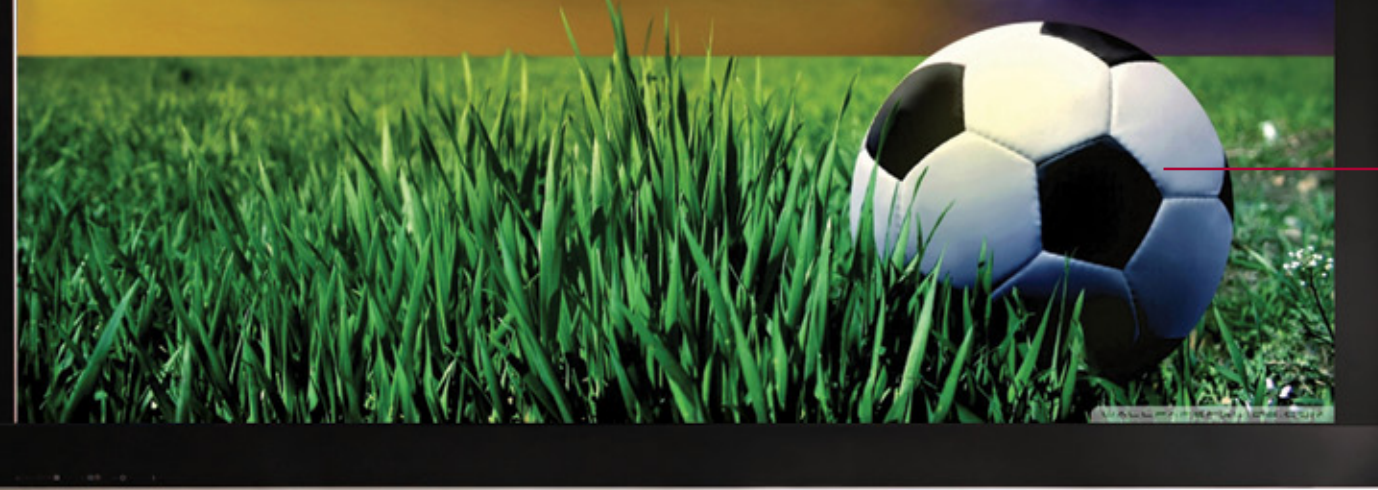

SERVICE AND SUPPORT

We're here whenever you need us.

PERFORMANCE

Satisfying electronic systems are much more than the sum of their parts. A high-performance automobile has most of the same parts as an economy car. It's just that they're better parts, engineered to perform at a higher level, to be more durable and to produce a more satisfying experience. The same is true of our systems.

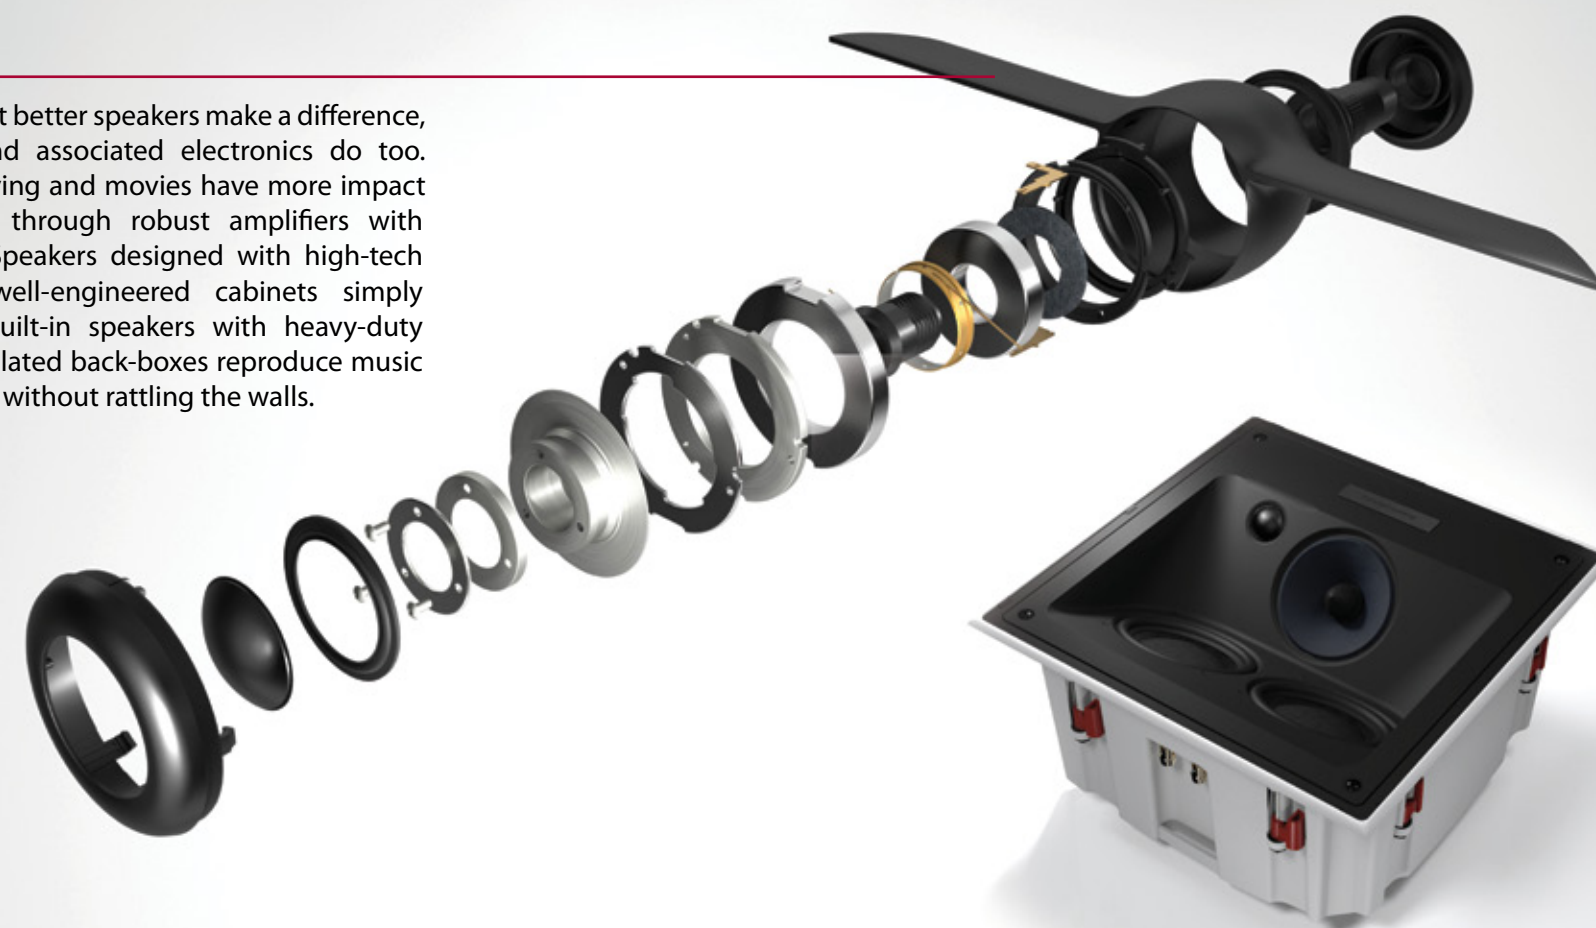

PICTURE

High-definition TV is now only the baseline. New technologies like UltraHD (4k) offer twice the resolution of conventional HD – important for larger screen sizes and simply astonishing to behold. OLED displays offer contrast and detail never before possible, along with curved screens for a more cinematic viewing experience. Even the conventional displays we recommend are the best their manufacturers know how to build.

SOUND

Most people know that better speakers make a difference, but amplification and associated electronics do too. Music is more involving and movies have more impact when reproduced through robust amplifiers with power to spare. Speakers designed with high-tech materials and well-engineered cabinets simply sound better. Built-in speakers with heavy-duty frames and insulated back-boxes reproduce music more faithfully without rattling the walls.

CONTROL

Truly universal remote control is here. Just about every component you buy will come with its own remote. Let us combine them all into a single, easy-to-use, upgradable device. If you like, you can even control your system(s) with the same smartphone and tablet devices you depend on every day.

CONNECTIVITY

Today, electronics in the home go way beyond audio/video entertainment. Automated lighting and window treatments can work in concert at the touch of a button to suit the mood or time of day. Climate-control and security systems can be brought together with a single interface, and of course almost anything can be accessed and controlled remotely, over the Internet, from anywhere in the world.

SYSTEM DESIGN

What you don't see is as important as what you do see in modern electronic systems. We install enterprise-grade routers, switchers and access points to ensure that uninterrupted Wi-Fi reaches you wherever you are, and that everyone can enjoy multiple streams of high-definition content all at the same time. We also future-proof your installation by running a variety of cables to each location, so everything is in place to upgrade as your needs change and new technologies emerge.

PEOPLE

You don't want a relationship with a business. You want a relationship with the people who work there. With MyerConnex, that's what you get. From Jon Myer on down, everyone on our staff is committed to exceeding your expectations. Many of us are former MyerEmco employees who have worked together for years. From concept through execution, your project is in the most-experienced hands in the Washington DC metro area.

Jon Myer, President

SERVICE & SUPPORT

Former customers of MyerEmco contact us all the time to maintain and upgrade their existing equipment. If something isn't working, let us know. We make house calls. Our technicians are expert trouble-shooters and problem-solvers. We're always happy to look at your gear, regardless of where you bought it, to ensure that you're getting the most from your audio/video system, home computer network and other electronic components.

EXPERIENCE

It all adds up to an exceptional experience working with us, and exceptional enjoyment of the cutting-edge technology products we provide.

We look forward to working with you.

Technology is exciting. It makes life more convenient, more manageable and more enjoyable than ever before. It is also ever-changing and occasionally complex. It takes extensive experience, knowledge and skill to make everything work together, and that's why we're here.

Today, not only audio/video equipment but also lighting, window-shading, climate-control and security systems can be linked together and integrated seamlessly into your home. The hardware – speakers, television sets, controls – can all be completely invisible, even while in use, and best of all, these systems can now be controlled with the smartphone and tablet devices you use every day. Making all this happen is what we do.

From MyerEmco to MYERCONNEX

We come from MyerEmco, a company that served the Washington DC area for more than 55 years. Contact us today for an in-home consultation.
